REVISION HISTORY

Version	Date	Comments	Author	Approval
1.0	07/12/2025	Initial Release	All members	
2.0	10/12/2025	Official Document	All members	

Team Number/ Team Name	C1SE.40
Project title	Elderly Health Monitoring and Alert System
How many students are on your team? The names of all team members	5 members: - Huynh Minh Thang - Mai Van Dung - Truong Manh Cuong - Nguyen Khac Nguyen Khoa - Vo Le Duy

Your Name	Truong Manh Cuong
------------------	--------------------------

Reflection

What challenges did you face while completing this project?

- This project was challenging because it was our first time building a health-related application with IoT integration, which made the system complex. Most team members also had limited experience with the required technologies, so learning new tools and coordinating our work over the three months was difficult.

What were the highlights for you/your team during this project?

- The highlight of our project was successfully building a complete health-monitoring app with a clean, user-friendly interface. We also developed an admin dashboard that works in parallel with the app, allowing real-time monitoring and data management. Making both systems run smoothly together showed our team's improved skills and strong collaboration.

If you were to do the project again, what would you do differently?

- If I could redo the project, I would choose to build a web-based system instead of a mobile app. Developing a website is faster and simpler for our team, and it avoids the complexity of IoT integration and mobile development. This would let us focus more on core features and overall system quality.

What is the most important thing you learned in this project?

- The most important thing I learned from this project is the value of teamwork. Because the project was difficult and involved new technologies, we had to communicate well and support each other to overcome challenges.

What part of the project did you do your best work on?

- I did my best work on the frontend development and the project documentation.

What was the most enjoyable part of this project?

- I enjoyed the teamwork—sharing ideas and working together with my group members.

What was the least enjoyable part of this project?

- The most difficult part of the project was working with the camera system, which caused many technical challenges.

How could you/your mentor(s) change this project to make it better next time?

- My mentor had forgotten most of the technologies we used, so he mainly reviewed our documents. Next time, more frequent and detailed technical guidance would help improve the project.

How did you share this project? (Examples: class or school presentation, guest collaboration, etc.)

- Our team will present this project to the evaluation committee as part of our official Capstone presentation.

Your Name	Nguyen Khac Nguyen Khoa
Reflection	

What challenges did you face while completing this project?

- The main challenge was working with new technologies that I had little experience with before. The project required continuous learning and adaptation. Managing tasks while keeping up with deadlines was also demanding.

What were the highlights for you/your team during this project?

- The highlight was the strong teamwork throughout the project. Team members supported each other and shared ideas to solve problems. This cooperation helped us complete the system successfully.

If you were to do the project again, what would you do differently?

- If I could do the project again, I would spend more time on early planning and system design. Better preparation would reduce errors during development. This would make the implementation process smoother.

What is the most important thing you learned in this project?

- The most important thing I learned is the importance of teamwork and careful planning. Working on a complex project requires clear communication and mutual support. These skills were essential for overcoming technical challenges.

What part of the project did you do your best work on?

- I did my best work on frontend development and project documentation. I focused on usability and clarity in both the interface and written reports.

What was the most enjoyable part of this project?

- The most enjoyable part was designing the user interface and seeing it function correctly. Collaborating with teammates also made the project enjoyable.

What was the least enjoyable part of this project?

- The least enjoyable part was revising the interface due to changing requirements. This sometimes-caused delays.

How could you/your mentor(s) change this project to make it better next time?

- Clearer technical requirements and UI guidelines from mentors would help improve the project. This would reduce unnecessary redesign work.

How did you share this project? (Examples: class or school presentation, guest collaboration, etc.)

- The project was shared through a formal Capstone presentation at the university.

Your Name	Mai Van Dung
------------------	---------------------

Reflection**What challenges did you face while completing this project?**

- The biggest challenge was developing the web system and handling technical issues related to system components. Some features required repeated testing and debugging. Limited experience with certain web technologies increased the difficulty.

What were the highlights for you/your team during this project?

- The highlight was completing the web-based system and ensuring it met project requirements. Seeing the website work correctly was a major achievement. Team cooperation played an important role.

If you were to do the project again, what would you do differently?

- If I could redo the project, I would focus more on testing the web system earlier. Early testing would help reduce bugs later. This would save time near deadlines.

What is the most important thing you learned in this project?

- I learned how to handle technical challenges in web development. The project helped improve my problem-solving skills. It also taught me how to work under pressure.

What part of the project did you do your best work on?

- I learned that teamwork and communication are critical to project success.

What was the most enjoyable part of this project?

- Working with the team to solve technical problems was enjoyable.

What was the least enjoyable part of this project?

- Fixing repeated technical errors was frustrating.

How could you/your mentor(s) change this project to make it better next time?

- More hands-on technical guidance would improve future projects.

How did you share this project? (Examples: class or school presentation, guest collaboration, etc.)

- The project was shared through the official Capstone presentation.

Your Name	Huynh Minh Thang
Reflection	

What challenges did you face while completing this project?

- Supporting multiple system components and coordinating tasks was challenging.

What were the highlights for you/your team during this project?

- Completing the project through strong teamwork was the highlight.

If you were to do the project again, what would you do differently?

- I would improve task planning and coordination.

What is the most important thing you learned in this project?

- I learned that teamwork and cooperation are essential in complex projects.

What part of the project did you do your best work on?

- I focused on system support and assisting teammates.

What was the most enjoyable part of this project?

- Collaborating closely with the team was the most enjoyable part.

What was the least enjoyable part of this project?

- Handling urgent issues near deadlines was stressful.

How could you/your mentor(s) change this project to make it better next time?

- Clearer milestones and regular progress reviews would help.

How did you share this project? (Examples: class or school presentation, guest collaboration, etc.)

- The project was presented during the official Capstone defense.
